1 System

1.1 Purpose

The purpose of this document is to define requirements for the desktop application myMoney. There exists a plethora of software for money management, each greatly varying in design due to the complex and multifarious clientele. This document may thus be to orient the development of the application. It may be used by:

Table 2: Document Users

Users and customers	To give feedback about the requirements.
System developers	To understand what functions and properties the system must contain.
Testers	To test the system against the requirements.
Writers of user manuals	To get material for user manuals.
Project team	To follow-up the status of the project against the requirements.

A Description of File Format: Tasks

Describe input file format.

B Description of File Format: Persons

Describe output file format.

Table 3: Use Case 1 - Create User Account

Action	Create User Account
Case ID	02
Summary	User gives information about a new user account, system validates it and creates the account.
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants fast and easy account creation, clear and comprehensible display, proof of successful account creation. 2. Company: Wants user interests to be fulfilled, wants to prevent erroneous input, wants fast communication with the local accountdatabase as well as fault tolerance in case of database conflicts, issues with editing authorisation, or other possible database problems.
Pre-Conditions	User has opened the application and is in the startup menu.
Success Guarantee	Account successfully saved in local account database, with name and password as specified by the user.
Main Success Flow	<ol style="list-style-type: none"> 1. User enters a username and password. 2. System validates username and password (format, whether username is already used, etc). 3. System creates new account. 4. System notifies the user of the successful account creation, then returns to home menu.
Exceptions	
Post-Conditions	
Priority	
Traces to Test Cases	

Table 4: Use Case 2 - Delete User Account

Action	Delete User Account
Case ID	02
Summary	User deletes a user account from the local accounts database, removing all bank accounts information associated with that account as well.
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants easy navigation and secure account deletion, no risk of accidental deletion, proof of successful account deletion. 2. Company: Wants user interests to be fulfilled, wants to ensure clean deletion from the database.
Pre-Conditions	User has logged in the user account he wants to delete.
Success Guarantee	user account is successfully deleted, all associated bank information is deleted, and user is returned to the home menu.
Main Success Flow	<ol style="list-style-type: none"> 1. User enters the account settings, then selects 'delete account'. 2. System brings up a confirmation menu to ensure that this selection was no accidentally entered. 3. User affirms his choice. 4. System successfully deletes all relevant entries in the local database, then notifies the user of this successful deletion. 5. User confirms having read this notification. 6. System brings the user back to the home menu.

Table 7: Use Case 5 - View Transactions for Specific Bank Account

Action	View Transactions for Specific Bank Account
Case ID	05
Summary	User selects specific bank account and views transactions associated with with selected bank account
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants quick and convenient viewing of previous transactions from one specific bank account 2. Company: Wants to give user ability to micromanage every aspect of the application down to each bank account and transaction.
Pre-Conditions	User has created and logged in a user account, and has added one or more bank accounts to his myMoney account.
Success Guarantee	User can view transaction by bank account.
Main Success Flow	<ol style="list-style-type: none"> 1. User selects specific bank account from list of all accounts. 2. System displays all previous transactions under under specified bank account. 3. User selects desired transaction. 4. System shows all information about desired transaction, such as date and amount withdrawn, deposited, or transferred.
Exceptions	
Post-Conditions	
Priority	
Traces to Test Cases	

Table 8: Use Case 6 - View All Transactions from all Bank Accounts

Action	View All Transactions from all Bank Accounts
Case ID	06
Summary	User can view all transactions that have been made from all bank accounts
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants easy and convenient viewing of all transactions among all bank accounts. 2. Company: Wants user interests to be fulfilled.
Pre-Conditions	User has created and logged in a user account, and one or more bank accounts have been added to the system.
Success Guarantee	User is able to conveniently view all transactions from all institutions in one display.
Main Success Flow	<ol style="list-style-type: none"> 1. User selects View All Transactions option. 2. System shows all transactions across all accounts on one display. 3. User can select desired transaction in the list. 4. System shows all information regarding selected transaction such as date and amount.
Exceptions	
Post-Conditions	
Priority	
Traces to Test Cases	

Table 9: Use Case 7 - View Transaction by Type

Action	View Transaction by Type
Case ID	07
Summary	User can view transactions by the following types: deposits, withdrawals, and transfers.
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants to view transaction by type, such as withdrawals, deposits, and transfers for convenient view of the movement of his/her money throughout the accounts and accurate records of spending. 2. Company: Wants user interests to be fulfilled. Wants to facilitate users ability to keep track of input and output of money between accounts.
Pre-Conditions	User has created and logged in a user account, added at least one bank account, and has made at least one type of transaction.
Success Guarantee	User is able to clearly view all deposits, withdrawals, and transfers that have been made.
Main Success Flow	<ol style="list-style-type: none"> 1. User selects View All Transactions option or View By Specific Bank Account. 2. System shows all transactions associated with previous choice. 3. User selects view transactions by type 4. System prompts user to choose which type of transaction he/she would like to view: deposits, withdrawals, transfers. 5. User selects one of the options 6. System shows all information regarding selected transaction such as date, amount, to which account, and from which account.
Exceptions	
Post-Conditions	
Priority	
Traces to Test Cases	

Table 10: Use Case 8 - Categorize Transaction

Action	Categorize Transaction
Case ID	08
Summary	User can select a category to represent a transaction.
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants to label each transaction as a specific type of spending, such as rent, bills, leisure, etc., to better manage and track spending habits. 2. Company: Wants user interests to be fulfilled. Wants to facilitate users ability to budget and manage money through simple categorization of spending.
Pre-Conditions	User has created and logged in a user account, added at least one bank account, and has made at least one type of transaction, and created categories to select from.
Success Guarantee	User can quickly and efficiently categorize each transaction.
Main Success Flow	<ol style="list-style-type: none"> 1. User selects desired transaction to categorize. 2. System shows all information about transaction. 3. User selects the + button. 4. System displays the saved categories in a drop down menu, or gives option to create new category. 5. User selects preferred category to represent the current transaction. 6. System saves transaction under chosen category.
Exceptions	
Post-Conditions	
Priority	
Traces to Test Cases	

Table 11: Use Case 9 - View Transactions by Category

Action	View Transactions by Category
Case ID	09
Summary	User can view transaction according to categories of spending.
Scope	money and budget management application
Level	user-goal
Actors	User
Stakeholders and Interests	<ol style="list-style-type: none"> 1. User: Wants to view transactions in different categories of spending such as rent, bills, leisure, etc., to view and monitor spending habits and allocate budget to each category of spending. 2. Company: Wants to optimize the ease in which a user can allocate his/her budget, and track spending habits.
Pre-Conditions	User has created and logged in a user account, has added on or more bank accounts, has made at least one transaction and labeled the transaction according to which category it belongs.
Success Guarantee	User can easily categorize and view transactions.
Main Success Flow	<ol style="list-style-type: none"> 1. User selects View All Transactions . 2. System shows all transactions across all accounts on one display. 3. User selects to view transaction by categories. 4. System groups transactions by similar category. 5. System displays transactions grouped by category.
Exceptions	
Post-Conditions	
Priority
